

Statuary. Fine works of art fabricated of copper, aluminum, stainless steel and countless other types of metal. And all exposed to environmental conditions that will cause them to corrode. How can they be protected? Simple. An application of Nyalic[®], a clear surface protectant.

Nyalic is an ultra-thin proprietary formulation of polymeric resins designed to withstand the rigors of space and proven to protect surfaces of all types. Nyalic is proven on a range of interior and exterior surfaces including stainless steel, copper, bronze, aluminum, anodized, chromed and galvanized metals, polished, milled or brushed finishes, painted surfaces and noble and exotic metals. Nyalic protects and seals metal surfaces to prevent corrosion and staining.

PREPARATORY WORK

An NFC proprietary surface preparation product should be used to remove all surface contaminants prior to coating. Surface must be completely dry before application begins.

APPLICATION METHODS

Nyalic can be applied by brush, roller or sprayer.

Scratches and abrasions can be field repaired using Nyalic in an aerosol can.

Nyalic[®]...clearly better protection[™].
