

Showing 3" toe length using the Vernier scale

2" shows the approximate center of articulation and widest part of the foot

1" apex of the frog

End of evaluator indicates approximate tip of coffin bone

"0" is center of frog

2.25" widest point of the foot. Handy for determining if one side of the foot is wider than the other.

Helpful for determining bar distortion. Use the edge of the evaluator: each leg represents .25"

One leg of the evaluator

Using all 3 legs if needed
